

S990A Rover Supervisor Kit

S990A GNSS, 800Ch, 4G, Wifi, BT, IMU - Bundle

Stonex S990A is a 800 Channel GNSS receiver characterized by a new feature that enhance the performances of field surveys. Not just a survey rover on a pole. With the correct accessories this allows your management to drive the job site or ROW with design plans displayed accurately in the background, allows for preconstruction topography checks along with quantity calculations, all while connected to the cloud for ease of sharing and updates. Use as a network rover or connected to your project base station.

S990A Receiver is equipped with all important connectivity capabilities: Bluetooth, Wi-Fi, UHF radio and 4G modem. The internal battery of 10.200mAh allows to work for 9 hours and can be recharged via a type-c connector. The color touch display and the WebUI are an easy and fast way to have the complete control of the receiver.
